**Viola1956** is a new accessories brand that designs fleeting products linked to a garment such as buttons, cufflinks and button covers. Each piece is designed to be long lasting collectibles. The Viola family has been a leader in the industrial production of metal fashion accessories since 1956 (hence the name of the company). Designers create pieces with a dual purpose, part fashion accessory and part personal object. They, not only, design with aesthetics in mind. They design with functionality, at times altering how a button is applied to a garment or how the cufflinks are used.

**MENTORS NOTE:** If you want to take your style to another level, Viola1956 is the key. Their accessories are the epitome of sleek. The button covers will add a modern (almost Bond... yes that, Bond) appearance to your button down dress shirt. The cufflinks will add some sophistication without the use of jewelry. It is the subtle additions to your wardrobe that are most noticed and most recognized. These accessories add effortless elegance for any evening.

Visit their [website](#) for a visual representation of their products and their uses.
